

Nestlé India Presentation

By: Mata, Danae and Alessandro

Nestlé India's Vision

To create shared value by optimizing profit for shareholders and having a sustainable positive impact on all stakeholders connected to our business.

Nutrition

- Continue to invest in Research and Development
- Work closely with local universities to develop healthy nutritious plans and work training programs
- Increase nutritional education and awareness
- Strengthen collaboration with suppliers and farmers
- Continue to build strategic partnerships with external stakeholders

Water & Environmental Sustainability

- Nestlé's current CSV plan (Pakistan) includes promoting drip irrigation to lessen water waste
- Goal is to create a shared value via helping environment and maximizing profit.
- For every three sources of clean water that are created by Nestlé, ensure that one is committed for product creation and the remaining is committed for the community's well-being.
- This would incentivise investment in Nestlé, increase PR, and provide employment opportunities to local populations.

Rural Development

- Train younger generations: on technical assistance, caring for cattle, informing them and providing learning opportunities about upcoming developments in the field
- Promote gender equality: empower women through education, work opportunities and resources, setting up vocational schools, day-care centers
- Establishing support centers for women: where they can get health check-ups, sanitary and other supplies and provide health and educational support
- Protection of national heritage: establishing museums and cultural centers, educational opportunities for the young, restoring historic buildings and sites
- Provide the same opportunities to rural areas as those given to people in the metropolises
